SQL Lab #1:

1. Find the customers whose company names that begin with the letter L.

2. Find all products that are discontinued.

3. Display the company name, contact title, city and country for all customers in Germany, Spain or Brazil where contact title includes "Sales".

4. Display all territories that do not have employees assigned.

5. List the company name and phone number of suppliers, shippers and customers in a single table. Add a column to display which type of company is in each row.

6. Same as #5, but this time include the country for suppliers and customers (the shippers table has no country info, so shipper rows will have a null value for this column).

7. Show the information for all orders going to Venezuela or Brazil that have not yet been shipped. Include the order ID, customer name, ordered and required dates, name of employee responsible for the order and the city, country, and postal code the order is to be shipped to.
